Sequence 65, Application US/09030701B

Sequence 65, Application US/09030701B

Patent No. 6214806

GENERAL INFORMATION:

APPLICANT: Schwartz, David A.

APPLICANT: Schwartz, David A.

TITLE OF INVENTION: USE OF NUCLEIC ACIDS CONTAINING

TITLE OF INVENTION: UNMETHYLATED CGG DINUCLEOTIDE IN THE TREATMENT OF

TITLE OF INVENTION: UNMERR: US/09/030,701B

CURRENT APPLICATION NUMBER: US/09/030,701B

CURRENT FILING DATE: 1998-02-25

PRIOR FILING DATE: 1998-02-25

PRIOR FILING DATE: 1997-02-28

NUMBER OF SEQ ID NOS: 65

SOFTWARE: FastSEQ for Windows Version 3.0

Sequence 103, Application US/09898361

BENERAL INFORMATION:
APPLICANT: Susan Mirray
TITLE OF INVENTION: ANTIERSE MODILATION OF TRANSFORMING GROWTH FACTOR BETA RECEPT
TITLE OF INVENTION: ANTIERSESION
FILE REFREENCE: RTS-0158
CURRENT APPLICATION NUMBER: US/09/898,361
CURRENT FILING DATE: 2001-06-21
NUMBER OF SEQ ID NOS: 163
SEQ ID NO 103
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Patent No. 6559294

GENERAL INFORMATION:
Patent No. 6559294

GENERAL INFORMATION:
Patent No. 6559294

GENERAL INFORMATION:
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragmes
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, pr
TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION and treatment of infection
TITLE OF INVENTION NUMBER: US/09/198,452A

CURRENT APPLICATION NUMBER: US/09/198,452A

NUMBER OF SEQ ID NOS: 6849

ERNOTH: 20

LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1, Application US/09670216

Sequence 5261, Application US/09198452A

Patent No. 6559294

GENERAL INFORMATION:

TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments

TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, preve

TITLE OF INVENTION: and treatment of infection

FILE REFERENCE: 9710-003-999

CURRENT APPLICATION NUMBER: US/09/198, 452A

NUMBER OF SEQ ID NOS: 6849

SEQ ID NOS: 6849
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 0.8%; Score 13.6; DB 1; Length 20; Best Local Similarity 80.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                              Sequence 2, Application US/09670216

Patent No. 659681

GENERAL INFORMATION:
APPLICANT: Bucala, Richard J.
APPLICANT: Cheeney, Jason A.
TITLE OF INVENTION: Inducible Phosphofructokinase and the Warburg Effect
FILE REFERENCE: 9511-064-27 DIV
CURRENT APPLICATION NUMBER: US/09/670,216
CURRENT APPLICATION NUMBER: US 09/183,846

PRIOR FILING DATE: 1998-10-30

PRIOR FILING DATE: 1998-10-31

PRIOR FILING DATE: 1997-10-31

SOFTWARE: FastSEQ for Windows Version 4.0

Patent No. 662674

GENERAL INFORMATION:
APPLICANT: O'Brien Timothy J.
APPLICANT: Underwood, Lowell J.
APPLICANT: Shigemasa, Karushi
TITLE OF INVENTION: Uses of Antileukoprotease in Carcinoma;
FILE REFERENCE: D6247

CURRENT APPLICATION NUMBER: US/09/692,820A

CURRENT PILING DATE: 1209-10-18

NUMBER OF SEQ ID NOS: 6

SOFTWARE: Microsoft Word 98

SEQ ID NO 4

LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match 0.8%; Score 13.6; DB 1; Length 20; Best Local Similarity 80.0%; Pred. | Sequence 4764, Application US/09371772B
| Patent No. 6566127 |
| GENERAL INFORMATION: |
| APPLICANT: Ribozyme Pharmaceuticals, Inc. |
| APPLICANT: Ribozyme Pharmaceuticals, Inc. |
| APPLICANT: Bacobedo, Jaime |
| APPLICANT: Brinchcomb, Dan |
| TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor |
| TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor |
| TILLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor |
| TILLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor |
| FILE REFERENCE: MBHBO0, 876-J (237/198) |
| CURRENT FILING DATE: 1995-08-10 |
| PRIOR APPLICATION NUMBER: US 60/005, 974 |
| PRIOR APPLICATION NUMBER: US 60/005, 974 |
| PRIOR PILING DATE: 1996-01-08 |
| NUMBER OF SEQ ID NOS: 14225 |
| SEG ID NO 4764 |
| LENGTH: 17
                                                                                                                                                                                                                                                 APPLICANT: ACCOUNTS THE TANCE OF THE OF THE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor FILE REFERENCE: MBHBO, 876-J (237/198)

CURRENT FILING DATE: 1999-08-10

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-07-711-303-6

Sequence 6, Application US/07711303

Patent No. 6337182

GENERAL INFORMATION:
APPLICANT: Cerutti, Peter A.
APPLICANT: Relley-Bosco, Emanuela
APPLICANT: Sandy, Martha
APPLICANT: Annetad, Paul
APPLICANT: Allstra, Jacob
APPLICANT: Allstra, Jacob
TITLE OF INVENTION: Method for the Quantitative
TITLE OF INVENTION: Determination of DNA Sequences
TITLE OF SEQUENCES:
ADDRESSEE: Finnegan, Henderson, Farabow, Garrett & ADDRESSEE: Dunner
STREET: 1300 I Street, N.W. Suite 700
CITY: Washington
STATE: D.C.
COUNTRY: USA
APPLICANT: Amerad, Paul
APPLICANT: Zijistra, Jacob
APPLICANT: Zijistra, Jacob
APPLICANT: Zijistra, Jacob
APPLICANT: Pourzand, Charareh
TITLE OF INVENTION: Method for the Quantitative
TITLE OF INVENTION: Determination of DNA Sequences
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:
ADDRESSEE: Finnegan, Henderson, Farabow, Garrett & ADDRESSEE: Dunner
STREET: 1300 I Street, N.W. Suite 700

US-08-908-643C-70/C

Sequence 70, Application US/08908643C

Sequence 70, Application US/08908643C

Patent No. 6120995

APPLICANT: Waldman, Scott A.

Barbar, Michael T.

Schultz, Stephanie

Parkinson, Scott J.

TITLE OF INVENTION: COMPOSITIONS THAT SPECIFICALLY BIND TO

COLORECTAL CANCER CELLS AND METHODS OF

USING THE SAME
Sequence 30, Application US/0933993A
Patent No. 6040179
GENERAL INFORMATION:
APPLICANT: Lex. M. Cownert
TITLE OF INVENTYON: ANTISENSE MODULATION OF G-ALPHA-12 EXPRESSION
FILE REPRENCE: RTS-0064
CURRENT APPLICATION WHERE: US/09/339,993A
CURRENT FILING DATE: 1999-06-25
NUMBER OF SEQ ID NOS: 47
SEQ ID NO 30
                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Bargary 18, Application US/09374958C
Sequence 78, Application US/09374958C
Patent No. 6677432
GENERAL INFORMATION:
APPLICANT: Stryker Corporation
TITLE OF INVENTION: Modified Proteins and DNAs of the TGF-beta Superfamily, Including TITLE OF INVENTION: Modified Morphogenic Proteins
TITLE OF INVENTION: Modified Morphogenic Proteins
TITLE OF INVENTION: Modified Morphogenic Proteins
GURRENT APPLICATION NUMBER: US/09/374,958C
CURRENT FILING DATE: 1999-08-16
NUMBER: OF SEQ ID NOS: 90
SOFTWARE: PatentIn version 2.0

                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 640

US-08-17-952-64/c

i Sequence 64, Application US/08117952

i Patent No. 5851760

GENERAL INFORMATION:

APPLICANT: Bvans, Glen A.

APPLICANT: Smith, Michael W.

TITLE OF INVENTION: SAMPLED MAPS OF COMPLEX GENOMES

NUMBER OF SEQUENCES: 797

CORRESPONDENCE ADDRESS:

ADDRESSE: Pretty, Schroeder, Brueggemann & Clark

STREET: 444 South Plower Street, Suite 2000

CITY: Los Angeles

COUNTRY: USA

COUNTRY: USA

STATE: CA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       COMPUTER: PODDY disk
MEDIUM TYPE: Floppy disk
